

## REBAR DETECTOR

Code : B050

- Used to detect the most frequent materials found behind walls, ceilings and floors, including ferrous and non-ferrous metals, AC live wires and studs.

### TECHNICAL SPECIFICATIONS

| Specification                        | Value                                                                                 |
|--------------------------------------|---------------------------------------------------------------------------------------|
| Detectable materials                 | Electricity, ferrous and non-ferrous metals, wood and metal substructures in drywalls |
| Detection depth, steel, max.         | 100 mm                                                                                |
| Detection depth, copper, max.        | 80 mm                                                                                 |
| Detection depth of live cables, max. | 50 mm                                                                                 |
| Detection depth of wood, max.        | 25 mm                                                                                 |

**ORDERING INFORMATION**

| Item                                    | Code      |
|-----------------------------------------|-----------|
| REBAR DETECTOR (Bosch)                  | B050X001B |
| REBAR DETECTOR (Proceq, Profoscope+)    | B050X002B |
| COVER METER (Proceq, Profometer 650 AI) | B050X003B |
